

PENNSYLVANIA COMPENSATION RATING BUREAU
F CLASS FILING

U. S. Longshore and Harbor Workers' Coverage Factor

In support of a modification to the United States Longshore and Harbor Workers' Compensation Coverage Percentage, which represents a load factor applied to state act coverage rates, the Bureau presents the following exhibits. In these exhibits, we compare benefit levels as prescribed under Pennsylvania law to those given by the Federal law. For brevity, we will use PA and USL when referring to the respective jurisdictions.

Exhibit I outlines the essential features of current USL and PA workers' compensation laws. Note that in footnotes on page 2 are the national and statewide average weekly wages that were used in developing the exhibits that follow.

Exhibit II summarizes the Bureau's findings. The ratios in column 2 are drawn from the subsequent exhibits. The weights representing the distribution of losses by type of injury are the same as those used in the Bureau's estimate of the effect of Act 57. We propose that the USL percentage be decreased from 79.3% to 79.1%.

Starting with Exhibit III and proceeding through Exhibit XII, we develop the factors that are used in Exhibit II. For each type of injury, we develop first the benefit level under the state act, then the corresponding benefit under the USL act. The respective ratios of these benefits are carried forward to Exhibit II.

The distribution of dependents in Exhibits III-A and III-B and of cases in Exhibits V-A and V-B are from the Workers Compensation Injury Table. The distribution of widows on Exhibits III-C and III-D were compiled from the Bureau's own data for the eight most recent policy years. All annuity values are derived from the 1999 United States Life Tables.

Please note that the USL&H loading factor does not include the Federal Assessment, which is shown in the Expense Loading.
