

PENNSYLVANIA COMPENSATION RATING BUREAU

Proposed Excess Loss (Pure Premium) Factors

Proposed excess loss (pure premium) factors are shown on the last page of the attachment together with the current factors and the percentage change.

The factors were produced using a methodology that relied solely on actual Pennsylvania size of loss experience.

As described in Exhibit 24a, the PCRБ is proposing to reassign classification hazard groups and expand the number of hazard groups to seven (A – G). These seven hazard groups can be combined to form four hazard groups (1 – 4). The following analysis derives excess loss factors consistent with the proposed hazard groups (A – G and 1 – 4).

Page 1 shows average claim costs by hazard group within each type of injury as well as overall average costs for all hazard groups combined. Total incurred loss weights by type of injury and hazard group are also shown.

Page 2 derives excess loss ratios by loss limitation for Hazard Group A using type of injury loss distributions from Exhibit 22. The excess ratios by type of injury are weighted together and the resulting average pure excess loss ratios are shown in the column labeled (1).

Pages 3 through 8 use the same approach to calculate excess ratios for Hazard Groups B through G respectively.

Since published loss costs in Pennsylvania include a provision for loss based assessments and the merit rating plan off-balance, it was necessary to apply an adjustment factor to express the excess ratios as a function of loss costs. This is shown in Columns (17) - (23) of page 9.

A risk load of 0.005, subject to a maximum equal to one-half each excess loss factor, was added. The resulting factors are shown in columns (24) - (30) of page 9.

The proposed excess loss factors shown on page 10 may differ slightly from these indicated on page 9. Excess loss factors will generally reflect an incremental cost per unit of exposure which decreases as loss limitation levels increase. To maintain this pattern of consistency, minor modifications to the indicated values on page 9 may be made and the resulting factors are shown on page 10.

Page 10 compares the proposed 2009 excess loss factors with factors derived using data consistent with the 2008 filing but modified to reflect the revised hazard group assignments. The percentage changes thus show the impact on excess factors as if the new approach had been employed in the 2008 filing as well.

Pages 11 through 17 are comparable to pages 2 through 10 although based on revised hazard groups 1, 2, 3 and 4. Page 18 compares the excess loss factors for hazard groups 1 – 4 with actual excess loss factors for the original hazard groups I – IV, all based on the 2008 filing material.
